Name	MARTINEZ PEGUERO ARTURO		
Thesis title	Wild Reframing (a.k.a. Reframing in the wild)		
Abstract			
<p>Recent research in reframing, within the scope of text style transfer, has so far made use of crowdsourced utterances in order to produce neutralizing or optimistic reframes. Our work aims to generalize reframing based on high-value, community-recognized utterances that produce changes of perspective from the sub-reddit r/ChangeMyView. With this data, we widen the scope of the direction of reframe since the changes in perspective don't only occur in a neutral or positive direction. We fine tune several models and perform few-shot prompting training.</p>
